LEED (Leadership in Energy and Environmental Design)

The U.S. Green Building Council's (USGBC's) Leadership in Energy and Environmental Design (LEED) program is intended to raise awareness, establish standards for, and stimulate "green" building practices. The LEED rating system awards points towards the certification of a building based on the recycled content of materials used as well as their proximity to the project location. Please find below relevant information on Hadrian's products for these two key areas of concern:

Recycled Content

This section of the program encourages the use of materials that have a specific recycled content in relation to the overall value of the building materials in the project.

Metal Toilet Partitions

Hadrian's powder coated metal toilet partitions and screens are manufactured from material that contains approximately 50% recycled steel (36% post-commercial / 14% post industrial). Hadrian also manufactures stainless steel toilet partitions that contain approximately 75% recycled stainless steel. The honeycomb core of Hadrian's doors, panels and pilasters is composed of 18% to 24% recycled content.

Solid Plastic Toilet Partitions

Standard solid plastic and Arch solid plastic toilet partitions are made from marine-grade polypropylene or polyethylene with a post-industrial recycled content of 1% to 10%. The long life span of solid plastic equates to less material used long-term due to minimal replacement need.

Lockers

Hadrian's powder coated metal lockers are manufactured from cold rolled material that contains approximately 50% recycled steel (36% post-commercial / 14% post-industrial). The honeycomb core of Hadrian's locker doors is composed of 18% to 24% recycled content.

Packaging Material

Hadrian's packaging materials (hardware boxes and locker end-caps) are made from 100% recycled material and our triple-ply, corrugated shipping container (USA) is 100% recyclable.

Powder Coating

Hadrian also takes special care with regard to the environment during the manufacturing process. Hadrian is the industry leader in environmentally friendly powder coating technology. Our powder paints are safe on the environment as there is virtually no waste, energy consumption is low and there are no solvent emissions. Hadrian's powder coated paints do not contain volatile organic compounds (VOCs).

Local / Regional Materials

This section of the program encourages the use of materials and products that are manufactured regionally (within 500 miles of the project site). The "manufactured" site refers to the location of final assembly.

Hadrian's powder coated, stainless steel and embossed stainless steel toilet partitions and powder coated lockers are manufactured in Burlington, Ontario. Solid plastic and Arch solid plastic toilet partitions are manufactured in Mentor, Ohio.
