The preferred choice for healthcare

Metpar solid surface is the preferred material for healthcare toilet partitions due to its hygienic properties, color selection, and ability to be inconspicuously repaired. The material is easily maintained, does not trap moisture, foster growth of bacteria, or spread of pathogens.

Metpar's Antimicrobial & Hygienic Solid Surface Solution.

Metpar's solid surface toilet partitions are fabricated from sheets of homogeneous solid acrylic-modified polyester with natural fillers, colorants, and granulates. All edges are beveled and polished and the material comes with a Class "A" fire rating. The material is available in a large variety of luxurious colors and patterns.

Surface materials used in healthcare environments must meet stringent standards and requirements and be able to withstand the high demands of everyday use. Healthcare designers turn to solid surface toilet partitions to create comforting and safe environments that promote health and healing.

The material is solid, seamless, and nonporous, making it impervious to water, moisture, and heat. It has natural anti-microbial and infection-controlling surface qualities that naturally inhibit the growth of mold, mildew, and dangerous bacteria, making them ideal for commercial restrooms in healthcare facilities where sanitation is of utmost importance.

Superior Quality

More durable and longer-lasting when compared to steel and plastic – which makes it perfect for high traffic environments.

Seamless

There are no open joints or seams to trap unwanted dust, fluids or contamination.

Excellent Durability

Superior strength and impact-resistance means less maintenance and a longer, more cost-effective life cycle.

Versatile Design

Dozens of color offerings are available from calming neutral to playful bold tones – ideal for healthcare interiors.

The Wonders of Metpar Solid Surface

Smooth, Non-Porous

Completely solid, impervious surface inhibits the growth of bacteria or mildew and reduces the possibility of cross-contamination.

Homogeneous

Homogeneous material which means there is no surface layer to wear or delaminate – it's completely color-through.

Resistant to Stains and Chemicals

Resists various chemicals, fluids and contaminants often found in healthcare environments.

Easy-to-Clean

Cleaning and sanitizing is accomplished with non-abrasive wipe-on or spray-on products common to healthcare.

Antimicrobial

The material does not support the growth of bacteria, mold, or mildew when cleaned properly.

Easy to Maintain

Homogeneous, color-through material, making it repairable and restorable to a new condition – often just by light sanding and polishing.

Exceeding Stringent Healthcare Standards

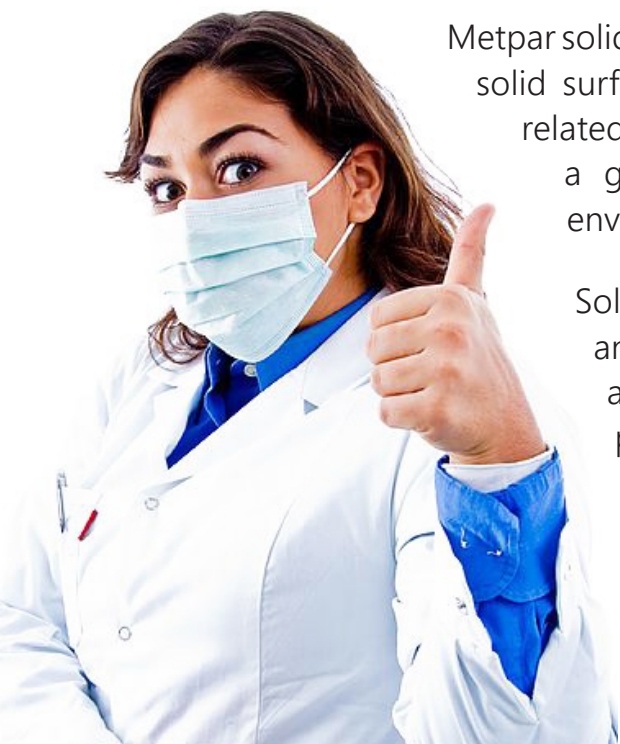

Clean, sanitary surfaces can help to prevent the spread of infection. Solid surface provides a seamless, non-porous, and solid surface, which eliminates gaps and crevices where pathogens could propagate – providing an extra level of hygiene.

Preventing the spread of infection starts at the surface.

In healthcare environments, the health and well-being of patients is paramount, and patient surrounds play a vital role. Every year, too many patients contract hospital acquired infections during a hospital stay. But clean, sanitary surfaces can help prevent the spread of infection. Sanitation in commercial restrooms of healthcare facilities can play as vital a role as sanitation in patient and operating rooms.

Metpar solid surface toilet partitions provide a smooth, non-porous acrylic solid surface, which are proven to reduce the risk of complications related to the spread of infection. The solid surface material provides a greater protection to patients in a commercial restroom environment as compared to standard plastic or metal partitions.

Solid surface is tough and stands up to the 24/7/365 wear and tear of healthcare environments, comes in aesthetically appealing design options, is simple to clean and sanitize, and protects against the spread of infection in healthcare facilities, such as hospitals, advanced medical centers, care homes, and hospice care facilities. If hygiene is of main concern, look no further than Metpar solid surface toilet partitions.

Hygienic Solutions *for today's healthcare facilities*

hospitals

Preventing the spread of bacteria amongst doctors, nurses, patients, and visitors is of utmost importance in hospital environments to prevent infection. Maintaining a clean workplace is the first line of defense.

advanced medical centers

Providing clean facilities and eliminating the growth and spread of bacteria can mean life or death to immune-susceptible and recovering patients. Hygiene of restrooms can be as important as cleanliness in operating rooms.

care homes & hospice care

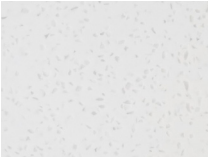

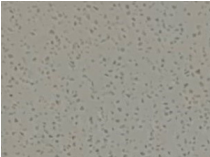

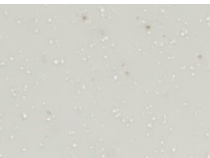

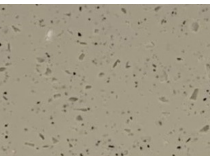

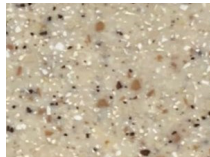

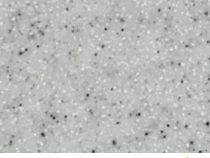

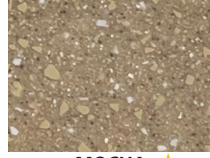

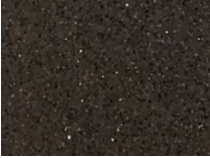

As we get older, we become more prone to bacteria, which is why seniors are more at risk of a range of infections and diseases. In a care home environment, ensuring that all residents are kept clean is vital.
